Apptochain Whitepaper

October 2026 · Evans Ekpekurede, Founder

Abstract

Apptochain is a token management and liquidity monitoring platform for Web3 project teams, launching first on BNB Chain. It gives a project one dashboard to see its liquidity pools, treasury wallets, vesting schedules and holder activity, and to explain that data clearly to its community.

On top of that data layer sit three AI agents: a Trading Research Agent, a Portfolio Agent and a Web3 Operations Agent. They turn raw on-chain activity into plain-language reports, alerts and community updates. The agents produce insight and recommendations; they do not execute trades or move funds.

Apptochain is a software product sold by subscription. This paper describes the problem, the product, its architecture and its roadmap. It contains no token offering and no token information.

The problem

Most Web3 teams manage liquidity and token operations with block explorers, spreadsheets and Telegram messages. That works until something goes wrong, and then nobody can say quickly what happened.

Teams and their communities face five recurring problems:

- **Liquidity is hard to read.** Pool depth, price impact and LP changes are spread across DEX interfaces and explorers. Founders often cannot say how much a large sell would move their price.
- **Changes are noticed late.** A large LP removal, a whale sell or an unexpected contract approval is usually spotted by the community first, after the damage.
- **Treasury and vesting are opaque.** Unlock dates, vesting progress and treasury balances live in private sheets, so holders assume the worst.
- **Reporting is manual.** Weekly community updates take hours to assemble by hand and are often late or incomplete.
- **Existing tools stop at the cap table.** Token management tools such as LiquiFi cover vesting and distribution well, but users report gaps in live liquidity monitoring, multi-wallet treasury views, alerts and community-facing reporting.

The result is lost trust. Communities read silence as risk, and good projects lose holders they could have kept with clear, timely information.

The solution

Apptochain puts a project's liquidity, treasury, vesting and holder data in one dashboard, watches it continuously, and explains it in plain language.

A team connects its token contract, pool addresses and treasury wallets once. From then on Apptochain:

1. **Monitors** pools, wallets and contracts on BNB Chain block by block.
2. **Measures** liquidity depth, price impact, holder concentration and vesting progress.
3. **Alerts** the team when something crosses a threshold they set, such as an LP removal above $10k or a single wallet selling more than 1% of supply.
4. **Explains** what changed through the AI agents, in reports the team can read in two minutes.
5. **Publishes** clear transparency pages and draft updates the team can share with its community on X and Telegram.

Apptochain is built to work on every screen, from a phone in a Telegram chat to a laptop in a treasury review.

Core modules

Apptochain has six modules. The first three are the data layer; the last three are the AI agents that read it.

Module	What it does	Who uses it
Liquidity Monitor	Tracks pool depth, price impact for set trade sizes, LP adds and removals, and locked versus unlocked LP	Founders, market makers
Treasury & Wallets	Shows every treasury, ops and marketing wallet in one view, with multisig status and spend against budget	Finance and ops leads
Vesting & Unlocks	Records vesting schedules, tracks claims, and lists upcoming unlocks with their share of supply	Founders, investors

Module	What it does	Who uses it
Trading Research Agent	Analyses market data, token fundamentals, volume and market conditions and writes a research report with a health score	Research teams, analysts
Portfolio Agent	Monitors holdings, flags concentration risk and runway, tracks unlocks and explains what changed each week	Treasury managers, funds
Web3 Operations Agent	Watches contract events, checks wallets against rules, follows vesting, and drafts community updates	Ops teams, community managers

Insight before automation. The agents start as advisers. They read, measure, explain and draft. They never sign transactions, place trades or move funds. Any action stays with the team.

Why projects need Apptochain

Apptochain saves teams hours each week and protects the trust their token depends on. A project needs it for five reasons.

- **Catch problems before the community does.** An alert on an LP removal or a whale sell gives the team minutes to respond, instead of hours of panic in the Telegram group.
- **Prove transparency.** A public page showing locked liquidity, treasury wallets and the vesting schedule answers the questions holders ask most, before they ask them.
- **Make better decisions.** Founders see how much a sell moves the price, how long the stablecoin runway lasts and when the next unlock lands, in one place.
- **Cut reporting time.** The Operations Agent drafts the weekly update from real data. A task that took three hours takes ten minutes of review.
- **Look ready for exchanges and investors.** Clean liquidity records and vesting data shorten due diligence for listings, launchpads and funding rounds.

Task	Without Apptochain	With Apptochain
Check pool health	Open several DEX and explorer tabs	One dashboard, refreshed every block
Spot a large LP removal	Community reports it	Alert to the team within minutes

Task	Without Apptochain	With Apptochain
Track vesting and unlocks	Private spreadsheet	Shared schedule with claim history
Weekly community update	2 to 3 hours by hand	Agent draft, about 10 minutes to review
Investor or exchange due diligence	Assemble data on request	Export ready-made reports

Architecture and security

Apptochain is read-only by design: it never holds private keys and never asks a team to sign a transaction.

- **Data layer.** Indexers read BNB Chain blocks, DEX pool events, token transfers and contract events, and store them in a time-series database.
- **Analytics layer.** Calculates liquidity depth, price impact, holder concentration, vesting progress and treasury runway from the indexed data.
- **Agent layer.** The three AI agents read the analytics layer and write reports, alerts and drafts. Every number in a report links back to the on-chain record it came from.
- **Delivery layer.** Web dashboard, mobile-friendly views, public transparency pages, and alerts by email and Telegram.

Security commitments:

- Wallet connection is used only to prove ownership of a project. No spending approvals are requested.
- Team accounts support two-factor authentication and role-based access (owner, admin, viewer).
- Project data is encrypted in transit and at rest. Private notes and settings are never shown on public pages.
- AI agents only see data the project has connected. They cannot reach wallets, sign messages or call contracts.

Who it serves and how Apptochain makes money

Apptochain earns revenue from software subscriptions and paid services, paid in stablecoins or by card. It does not depend on any token.

Customers. Token projects from launch to mature, launchpads and incubators that support many projects, market makers, and crypto funds that manage treasuries.

Revenue streams

1. **Subscriptions** (main revenue). Monthly or yearly plans for project teams, priced by the number of tokens, pools and wallets monitored.
2. **AI agent credits.** Each plan includes a monthly allowance of agent reports. Teams that need more research reports or drafts buy extra credits.
3. **Partner plans.** Launchpads, incubators and listing services pay one fee to monitor all their portfolio projects, with white-label transparency pages.
4. **Verified Transparency Badge.** A yearly paid review that confirms a project's liquidity locks, treasury wallets and vesting data, shown on its public page.
5. **Data and API access.** Funds, exchanges and analytics teams pay for API access to aggregated liquidity and risk data.
6. **Custom reports.** One-off due-diligence and liquidity health reports for listings, investors or audits.

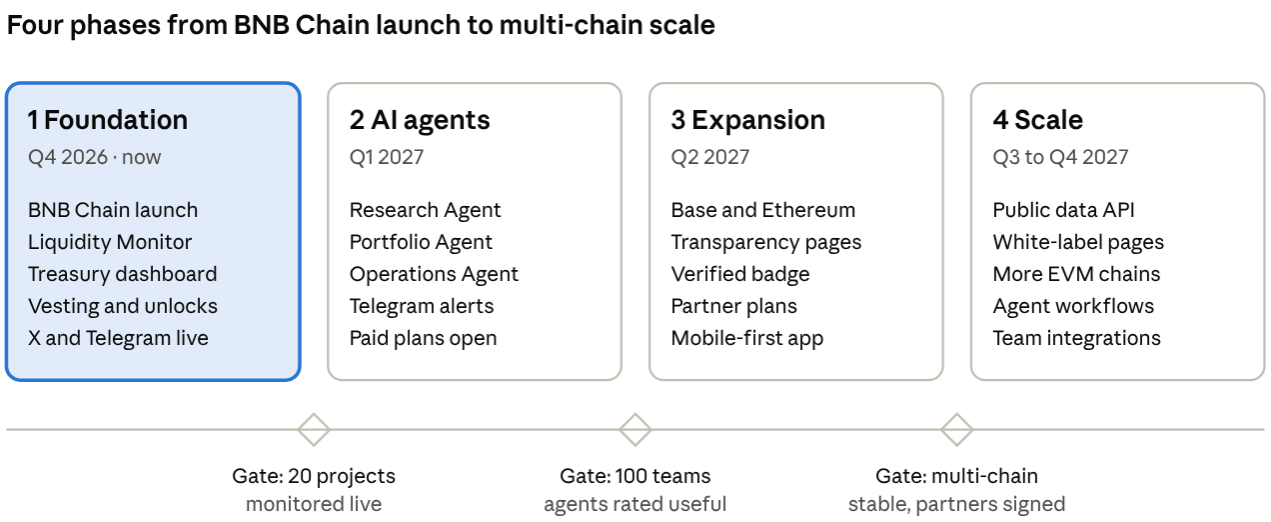

Proposed plans (to be confirmed before launch)

Plan	Price (USD per month)	Includes
Starter	Free	1 token, 1 pool, 2 wallets, weekly summary
Growth	99	1 token, 5 pools, 10 wallets, real-time alerts, 50 agent reports
Pro	299	3 tokens, unlimited pools, 30 wallets, all agents, public transparency page
Partner	From 999	Portfolio of projects, white-label pages, API access, priority support

The free plan brings teams in. Alerts and the AI agents are what convert them to paid plans, because they save time the team can measure.

Roadmap

Apptochain launches on BNB Chain in Q4 2026 and reaches multi-chain scale by the end of 2027. Each phase starts only when the gate before it is met.

Apptochain roadmap · 4 phases, 3 gates

Dates are targets. A phase moves only when its gate is met, so the team ships working software before adding the next layer.

Community and contact

Apptochain is founded by Evans Ekpekurede, Board Chairman of Royalty Group, and built for teams who want their token's health to be visible and easy to explain.

- X: @apptochain
- Telegram: t.me/apptochain

Project teams that want early access to the Foundation phase can apply through either channel.

Terms and Conditions

These terms govern use of the Apptochain platform, website, dashboards, AI agents and related services (the "Service"). By creating an account or using the Service, you agree to them.

1. **Eligibility.** You must be at least 18 years old and able to enter a binding contract. You may not use the Service where it is prohibited by law or sanctions.
2. **Accounts.** You are responsible for your login details and for all activity under your account. Tell us promptly if you suspect unauthorised access.
3. **What the Service does.** Apptochain reads public blockchain data and data you connect, and presents analytics, alerts and AI-written reports. The Service is read-only. It never holds your private keys, signs transactions or moves funds.

4. **No financial advice.** All content, including AI agent reports, health scores and research, is for information only. It is not investment, financial, legal or tax advice. You make your own decisions and bear their outcome.
5. **AI output.** Agent reports are generated automatically and may contain errors or omissions. Check important figures against the linked on-chain records before acting on them or publishing them.
6. **Data accuracy and availability.** Blockchain data, third-party price feeds and DEX data can be delayed, wrong or unavailable. We aim for high uptime but do not guarantee the Service will be uninterrupted or error-free.
7. **Acceptable use.** You may not use the Service to manipulate markets, mislead investors, publish false transparency claims, scrape it at scale without an API plan, attack its systems, or break any law.
8. **Your data.** You keep ownership of the data you connect and the notes you write. You allow us to process it to run the Service. Data you make public, such as a transparency page, can be seen by anyone.
9. **Fees and billing.** Paid plans are billed in advance, monthly or yearly, in stablecoins or by card. Fees are non-refundable except where the law requires otherwise. We will give at least 30 days' notice of price changes.
10. **Verified Transparency Badge.** The badge confirms only the specific data reviewed on the review date. It is not an audit, endorsement or guarantee of a project's safety or value, and it can be withdrawn if the data changes or was misrepresented.
11. **Intellectual property.** The Service, its software, design and brand belong to Apptochain. You receive a limited, non-transferable right to use it while your account is active.
12. **Suspension and termination.** You may close your account at any time. We may suspend or close accounts that breach these terms or put other users at risk.
13. **Limitation of liability.** To the extent the law allows, Apptochain is not liable for trading losses, lost profits, token price movements or indirect damages. Our total liability is limited to the fees you paid in the 12 months before the claim.
14. **Changes to these terms.** We may update these terms. We will post the new version and its effective date, and material changes will be notified by email or in the dashboard.
15. **Governing law.** These terms are governed by the laws of the jurisdiction in which Apptochain is registered, to be confirmed at incorporation.
